

Mini Project Report - 01

Master of Computer Application – Gen AI
Semester – I

Sub: Front-End Frameworks and Technologies

Topic: RESUME

By

Name: RAVI RATHORE

PROV-Reg no.: PROV/ASAC/MCA/7/26/079

Faculty Name: VEERA RAGHAV K

Faculty Signature: _____

**Department of Computer Application
Alliance University
Chandapura - Anekal Main Road, Anekal
Bengaluru - 562 106**

August 2025

INTRODUCTION

The HTML Resume Web Page is a structured document built using semantic HTML5 elements to showcase professional qualifications online. The primary objective of this project is to organize candidate details—including personal contact links, professional summary, academic qualifications, certifications, technical projects, and core skill sets—into a clean, accessible layout. The layout uses standard HTML tags such as anchor elements for direct email and portfolio links, tabular structures (`<table>`, `<tr>`, `<th>`, `<td>`) with inline CSS styling for educational backgrounds, and unordered lists (`<ul>`, `<li>`) for project bullet points and skills groupings. This project demonstrates core web development techniques for structured document architecture, table formatting, and resume presentation using raw HTML.

Data Science Certificate - Nasscom Foundation

Projects

Sql- Retail Sales Analysis

- Designed and queried a retail sales database in PostgreSQL to analyse customer purchase patterns, product performance, and revenue trends.
- Wrote SQL queries using joins, aggregate functions, and subqueries to answer business questions (top products, monthly sales trends, customer segments)
- Presented findings through a storytelling approach on LinkedIn, translating raw query output into clear business insights.

Ai Resume Analyzer

- Developed a Streamlit web app to analyze resumes and match them against job descriptions using the Groq API (Llama 3.3 70B) and PyMuPDF
- Built a text extraction and skill-matching algorithm to generate a resume score with improvement suggestions.
- Designed a responsive interface for file upload and automated report generation.

Personal Finance Assistan

- Built a Streamlit-based finance assistant that analyzes personal spending data and answers natural-language finance questions via a Groq-powered chatbot
- Used Pandas to clean and aggregate transaction data, producing summaries and visualizations of spending patterns
- Implemented an interactive analyzer module to surface trends and flag anomalies in financial data

Face Detection Model

- Developed a real-time face detection system using OpenCV and Python with Haar cascades / pre-trained models
- Achieved accurate detection on live webcam feeds.

Skills

- Languges : Python, SQL
- Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Joins, Subqueries, Aggregate Functions, Window Functions
- Databases: PostgreSQL, MySQL
- Tools: Excel, Jupyter Notebook, Git and Github
- Machine Learning (Basics): Supervised vs Unsupervised Learning, Regression vs Classification, Train/Test Split, Overfitting, Linear Regression, Decision Tree, K-Means Clustering
- Soft Skills: Critical Thinking, Problem-Solving, Effective Communication

Professional Summary

Results-driven MCA student with hands-on AI/ML internship experience and strong expertise in Python programming, MySQL database management, and Django web development. Skilled in building machine learning models, GUI-based applications, and API integrations. Passionate about solving real-world problems with datadriven solutions, automation, and software engineering best practices.

Education

Degree	Institution	Year	Percentage/Gpa
MCA	Alliance	2028-	-
BCA	Gniot	2025	60
SSC	Vidya Niketan School	2022	60
HSC	Vidya Niketan School	2022	84

Certificates

Data Science Certificate - Nasscom Foundation

Projects

Sql- Retail Sales Analysis

- Designed and queried a retail sales database in PostgreSQL to analyse customer purchase patterns, product performance, and revenue trends.
- Wrote SQL queries using joins, aggregate functions, and subqueries to answer business questions (top products, monthly sales trends, customer segments)
- Presented findings through a storytelling approach on LinkedIn, translating raw query output into clear business insights.

CONCLUSION

The HTML Resume project successfully demonstrates how foundational markup tags and basic inline styling can be applied to build an organized digital resume. By systematically structuring sections through block containers (`<div>`), horizontal dividers (`<hr>`), tables, and list structures, the application provides an easily navigable overview of an individual's technical background, academic journey, and project achievements. This project reinforces practical competencies in HTML document structuring, text alignment properties, table management, and semantic layout design for personal branding.
